TRUSTEDSEC

Incident Response

Organizations impacted by security incidents have a reliable partner in TrustedSec to determine the extent of the compromise and create actionable steps to keep the damage under control.

Our Incident Response team is focused on helping clients recover from Information Security events while minimizing the impact on the organization. Whether the incident is caused by a malicious insider, an external attacker, or a large-scale breach, TrustedSec can provide thorough Incident Response and Forensic Analysis services.

TrustedSec analysts are highly trained and experienced, having contributed to projects for the National Security Agency and U.S. Armed Forces for intelligence-related missions. With professional experience in the private and government sectors, only top-level senior consultants perform any type of forensic analysis.. TrustedSec's experts are here to assist in any situation and respond to incidents in real time.

TrustedSec consultants draw on a range of unique skills, experience, and technology to investigate each incident, contain the situation, eradicate the attacker, and remediate the environment. TrustedSec utilizes industry-standard, top-class hardware and software while performing incident response and forensic activities to ensure quick and accurate results. The techniques used by TrustedSec are admissible in a court of law, ensure appropriate chain of custody, and employ the highest standards of quality.
