```

query.sql

```sql
SELECT name, description FROM
standard.incidentResponse WHERE topic IS NOT
'today';
```

name	description
Policy	The why and the who. The rules, people, authority, and what the commitments are. Changes rarely and is approved by leadership.
Standard	The minimum required settings, timeframes and tools that everyone must meet.
Procedure	Routine work. Step-by-step instructions for a task the team repeats.
Runbook	Technical steps for one specific scenario, written for the hands on the keyboard.
BC/DR plan	Business continuity keeps critical work running during any disruption. Disaster recovery restores the systems afterward.
Risk management	Finds, records, ranks and treats risks before they happen.

   case "Red":    FullResponse(); break;
}
```

Alert or report comes in
Only an alert, with nothing confirmed?
Technical Lead checked and found no signs of compromise
yes
Close the event
Log it; no incident declared
no: declare an incident
Is sensitive data exposed or at risk now?
Or systems encrypted, money moving, or more than two critical systems affected
yes
Red (P1)
All Tab 3 powers unlocked
no
Are one or two critical systems affected?
Contained to a known area, no data loss confirmed
yes
Yellow (P2)
Isolate and freeze wires
no
Green (P3)
Non-critical systems only, or existing controls stopped it.
Your IT team handles it; daily check-ins until closed.

$ man redbinder

```
NAME
    redbinder - what to grab before it hits the fan

SYNOPSIS
    redbinder [--update] [--customize] [--practice]

DESCRIPTION
    A printed guide for the first hours of an incident.
    It only works if it is current, fits your org, and people know where to find it.

OPTIONS
    --update      Review quarterly and after any change in staff, vendors, or systems. Stale contacts
fail when you need them most.
    --customize   Every class here is a template. Rename it, cut it, add to it. Your org, your
binder.
    --practice    Run a tabletop at least once a year. A plan nobody has opened is just paper.

BUGS
    Stored only on the network it is meant to rescue.

SEE ALSO
    NIST SP 800-61, your IR retainer, your cyber insurer
